Introduction

Through this document, we offer a summary as introduction to UDS Enterprise software: what it is, how it is commercialized, our Partner Program, main references and additional information.

About UDS Enterprise

UDS Enterprise is a multiplatform connection broker for:

- VDI: Windows and Linux virtual desktops administration and deployment
- App virtualization
- Desktop services consolidation

In short, UDS Enterprise manages user access to IT resources in Data Center or Cloud.

What provides UDS Enterprise?

UDS Enterprise facilitates management, providing flexibility and economy to any desktop services platform.

UDS Enterprise allows you to deploy both Windows and Linux virtual desktops using different authentication systems, transports and from main third party hypervisors.

In addition, UDS Enterprise allows you to manage apps and other IT resources in the Data Center or cloud through additional modules.

How is UDS Enterprise commercialized?

VirtualCable is the company that develops, supports and commercializes UDS Enterprise.

UDS Enterprise is commercialized through a subscription model, which includes software updates, patches and 8x5 email support.

UDS Enterprise may be purchased at the company VirtualCable or through its Authorized Channel Partners.

In addition, VirtualCable offers professional services in its portfolio to help its partners and clients in the process of installation of UDS Enterprise.

What is the Partner Program?

The UDS Enterprise Partner Program authorizes companies and developers to commercialize software subscriptions and associated services, expanding its portfolio and complementing its range of licensed software and third party hardware.

UDS Enterprise's Authorized Partners are IT companies which provide services at a national and international level.

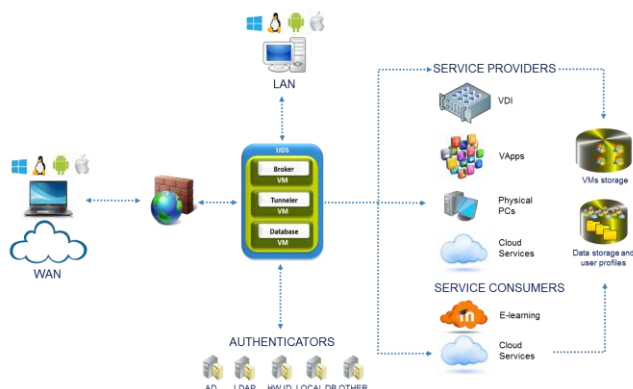

Ok, I'm interested, what comes next?
