

UDS Enterprise

Windows virtual desktops with UDS Enterprise

www.udsenderprise.com

Introduction

UDS Enterprise is the main component in a desktop virtualization platform, allowing the administration and management of virtual desktops, among other IP services, and their lifecycle.

Thanks to the UDS Enterprise architecture and design, it is possible to design new functionalities according to the clients' needs. UDS Enterprise allows you to configure virtual desktop platforms with low acquisition costs, as it permits virtual desktops to be deployed on different hypervisor platforms, including on proprietary platforms such as Open Source, and connected to virtual desktops with Windows OS in both its desktop version as well as in its server version.

With UDS Enterprise it is possible to connect to Windows virtual desktops using a wide variety of alternatives, including those which incorporate access via HTML5.

Additionally, UDS Enterprise is responsible for automating the deployment of Windows virtual desktops, managing their lifecycles at all times.

To carry out all these tasks, UDS Enterprise incorporates an agent that runs on the Windows desktop, creating a connection channel with the operating system. This allows UDS Enterprise to acquire usage data from the machine at all times and perform controlled operations without interrupting user activity.

What does a user station based on Windows provide?

Standardization. Both the desktop and server versions of Microsoft Windows are currently the most frequently implemented operating systems. Many tools and applications are developed to be compatible with and easily integrated into this operating system.

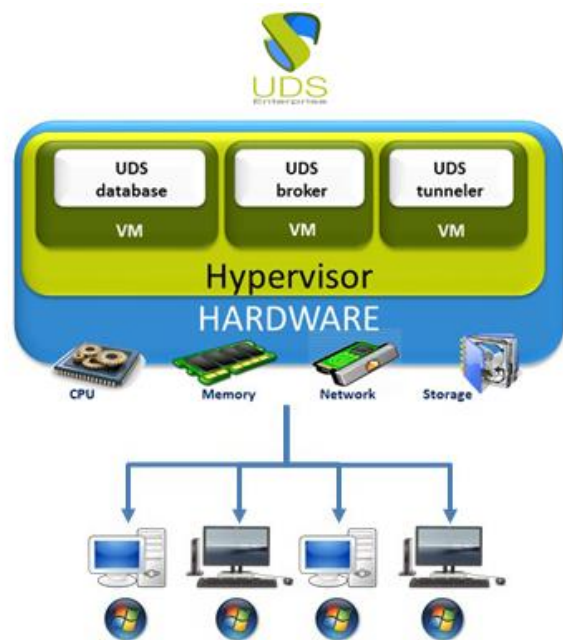

Easy application installation. Any user can easily install applications by using assistants.

Centralized management tools and administration.

The operating system incorporates its own centralized administration and management console, to which different modules can be added. The manufacturers of additional management tools develop them so that they can be integrated into the management console, resulting in a very similar environment appearance and a rather flat learning curve of handling these types of tools.

Unlimited services. Due to the popularity of the operating system, a large number of companies and an unlimited number of technical experts can be found on the market offering support and maintenance services.

Windows VDI with UDS Enterprise

Support and professional services

VirtualCable sells UDS Enterprise through a subscription model, including product support and updates in segments based on number of users.

Additionally, VirtualCable offers a broad portfolio of professional services to install and configure UDS Enterprise and other virtualization technologies.
