

Multi-cloud management and administration from a single console

*The next version of UDS Enterprise includes support for the multicloud manager
Nutanix Prism Central*

Madrid, January 12, 2022.- The next version of the [UDS Enterprise](#) connection broker incorporates support for the Nutanix Prism Central technology. Nutanix's multicloud manager joins the list of UDS Enterprise service providers.

Thanks to this development, any organization will be able to manage their entire Nutanix hyperconvergence infrastructure from a single console, the administration of UDS Enterprise. This enhancement makes managing multiple clusters of Nutanix's open source-based hypervisor, Acropolis AHV, as simple as possible. In addition, it helps to program and automate IT tasks and obtain predictive analytics of the environment in order to optimize it as much as possible.

These types of actions exemplify the effort and commitment of [Virtual Cable](#) to expand the number of technologies supported in UDS Enterprise to give more freedom and flexibility to its customers. Nutanix Prism Central joins a large number of technologies supported by this software, such as VMware vSphere, VMware Cloud Director, Citrix Hypervisor, Microsoft Azure, Hyper-V, Proxmox, RHEV, oVirt...

The integration of the Nutanix manager in UDS Enterprise helps to further simplify the management of the entire IT infrastructure, optimizes the work of the IT team and improves efficiency and productivity. "Our goal is to help administrators create the best environment for their users, always thinking in terms of flexibility, practicality and security," explains Félix Casado, CEO of Virtual Cable.

"This alliance with Virtual Cable is one more example of the importance for Nutanix of having the best ecosystem of partners, to whom we offer a standard platform for all types of end-user computing (EUC), VDI and Desktop as a service, which stands out for its ease of use, scalability and ability to overflow to other locations and public clouds," says Alejandro Solana, Technical Director of Nutanix Iberia.

The two companies have had a technology alliance for years. So much so, that UDS Enterprise is certified as Nutanix Ready and they have carried out large projects together for organizations such as the [Public University of Navarra](#), the [University of La Laguna](#) or [Mondragon Unibertsitatea](#).

About Virtual Cable

Virtual Cable develops, supports and markets UDS Enterprise through a subscription model based on the number of users, which includes product support and upgrades. The Virtual Cable team has over 30 years expertise in IT and software development and more than 15 years expertise in virtualization technologies. Millions Windows and Linux virtual desktops are deployed everyday worldwide with UDS Enterprise.
